I'm a junior Front End Web Developer with extensive experience in customer satisfaction. I began my career in restaurant service as a Line Cook and quickly grew in to a management position. As a Manager, I was required to maintain a high level of empathy and willingness to resolve conflict with both staff and clientele. I made the personal decision in 2015 to begin learning the skills necessary to transition into a more flexible career that would better accommodate my disability.

My education at Baker College and Mott Community College focused primarily on Graphic Design and Business Communications. I found great programs online such as Udacity, Codecademy, Udemy, and FreeCodecamp to begin my journey into web development. I've completed several bootcamps and have earned certifications for Responsive Design, Front End Frameworks, and ReactJS. More recently, I became motivated to study web accessibility and learn how to build projects that fully comply with WCAG (Web Content Accessibility Guidelines).

On most days I can be found creating custom components and landing pages on Codepen for practice and testing purposes. I really enjoy using front end frameworks such as Bootstrap or Google's Materialize to jump start my projects. I'm also experienced with writing semantic HTML, creating custom styles with CSS, and using vanilla Javascript. I have a working knowledge of Adobe products such as Illustrator, Photoshop, and XD. Moving forward, I'd be interested in furthering my current knowledge of Javascript frameworks such as React and Angular.

I'm currently seeking a remote role where I can collaborate and grow as a developer. I'd love to become the next addition to your team and contribute my creative skills!
